

This is it! The best patch out there. You can enjoy all your favorite software without the hassles of updating them every time some new vulnerability arises. PATCHED [NoJokeTuning] 2-in-1 Patch for Adobe Master Collection CS6 [WORKING] will allow you to install all the latest updates for this version of Adobe, including Reader DC, Acrobat DC, and Flash Player 25. This saves you hours upon hours on trying to install these updates separately - it's already done for you so just download and go! Or even better yet - since this patch includes Reader DC and Acrobat DC, your office documents are automatically protected with PDF encryption when created or edited through these apps. Acrobat DC also allows you to sign PDF documents, making them a lot more secure. There is a possibility that you might be a little slow to accepting Adobe's monthly updates because of how annoying they can be, but if you use the patch, you will surely find it worth it. This patch is very simple to install - just run the setup file and select "Patch". The only con I can think of for this patch is that there are some reports saying that not all programs are updated properly. However, this should not matter because the vulnerabilities fixed only apply if you are running outdated versions of Adobe Master Collection CS6 - which you should not do. You shouldn't need to reinstall your programs and software after applying this patch. These updates are cumulative, meaning that any updates from Adobe since the last time you installed this patch will be included in the install. Simply run the update app when it prompts you to do so - no need to reinstall anything. PATCHED [NoJokeTuning] 2-in-1 Patch Adobe Master Collection CS6 [WORKING]. CHANGELOG: Version 1.5 - Fixed a problem that was causing an unlock notification to pop up when uninstalling. Version 1.4 - Updated the release notes and update dates. Please note: This is not a product and it will not be supported or updated by Adobe Systems Incorporated. This patch will only generate installers but you will still need to manually download and install the programs from Adobe's site if you want them to work properly. Version 1.3 - Fixed a problem when installing updates for CS6. Version 1.2 - Fixed bugs when installing updates for Lightroom 5 and 6. Fixed an error in the ReadMe file about the uninstaller not deleting programs properly. Updated the ReadMe file with more information on how to fix any problems with program installation using the patch (see below). Version 1.1 - Added master collection version number to readme file (so that it will show up in Adobe's update history).
